

Clinical Study Visit

Population ageing is a global phenomenon. People are living longer than before and this demographic fact challenges, among other things, the traditional and costly hospital-centered system in elderly care. For decades Finland has developed innovative and effective solutions aiming to improve quality of life for the elderly and at the same time prevent the costs of health care rising. Clinical Study Visit offers participants a very special opportunity to learn from a variety of best practices of Finnish elderly care.

Target group

International welfare and healthcare experts, innovators, educators, entrepreneurs who are interested in Finnish elderly care service system, practices and education.

Clinical Study Visit

Benefits for participants

- Capacity building by benchmarking Finnish elderly care service system – the Finnish quality recommendations, acts and European Core Competences for working with older people will be introduced
- Getting to know the highly qualified Finnish elderly care organisations and understand how they operate in practice
- Authentic learning experiences, inspiring participatory methods
- Networking and partnerships with Finnish organisations and companies in elderly care and lifelong learning

Instructors

Experts of Karelia University of Applied Sciences

Interpretation

Interpreter service available if needed.

Group size

Preferable group of 10 participants.
